assessment methods

Knowledge - knowledge achieved by taking this course are verified by the following means:

Individual presentation at a seminar

Skills - skills achieved by taking this course are verified by the following means:

Individual presentation at a seminar

Competences - competence achieved by taking this course are verified by the following means:

Individual presentation at a seminar

prerequisite

Knowledge - students are expected to possess the following knowledge before the course commences to finish it successfully:

independently use theoretical fundamentals from branch of fluid mechanics, thermomechanics, mechanics of solids bodies, elasticity and strength of materials

Skills - students are expected to possess the following skills before the course commences to finish it successfully:

to apply gained knowledges from from branch of fluid mechanics, thermomechanics, mechanics of solids bodies, elasticity and strength of materials in the practice

Competences - students are expected to possess the following competences before the course commences to finish it successfully:

N/A

teaching methods

Knowledge - the following training methods are used to achieve the required knowledge:

Field trip

Skills - the following training methods are used to achieve the required skills:

Field trip

Competences - the following training methods are used to achieve the required competences:

Field trip

learning outcomes

Knowledge - knowledge resulting from the course:

to describe and to explain main functions of power stations

Skills - skills resulting from the course:

to describe and explain in the practice three-dimensional solution of power stations

Competences - competences resulting from the course:

N/A
